**Abstract of JP6299077**

**PURPOSE:** To obtain a resin composition excellent in the rate of degradation in the natural environment, e.g. in water or soil and useful for obtaining a molding such as a container for baits by mixing a biodegradable plastic with a water-soluble thermoplastic resin in a specified ratio.

**CONSTITUTION:** The composition is prepared by mixing 20-80wt.% biodegradable plastic, desirably polyhydroxy-butyrates/polyhydroxyvalerate copolymer or polycaprolactone with 20-80 pts.wt. water-soluble thermoplastic resin, desirably polyethylene oxide of a weight-average molecular weight of 50000-10000000.
